

Definire le priorità della ricerca coinvolgendo cittadini e pazienti

Paola Mosconi

Laboratorio di ricerca sul coinvolgimento dei cittadini in sanità
Dipartimento di Salute Pubblica

IRCCS-Istituto Mario Negri

Cosa si intende per coinvolgimento ...

È un **processo-percorso** attraverso il quale cittadini & pazienti *non sono solo soggetti* della ricerca ma intervengono:

- nel fissare l'agenda di ricerca
- nella progettazione di strumenti di raccolta dei dati
- nella fase di raccolta dei dati
- nell'analisi e interpretazione dei risultati della ricerca
- nella diffusione dei risultati e valutazione della ricerca

Chi rappresenta chi?

Cittadini e pazienti, utenti attuali o futuri di servizi sanitari

con riferimento anche ai membri della famiglia, alle persone che si prendono cura degli altri e ai membri della collettività

con riferimento anche al variegato mondo dell'associazionismo organizzato

The Informed Patient

Quali sono i vantaggi del coinvolgimento?

Vedere il mondo in una **prospettiva multidisciplinare** di condivisione delle scelte e quindi

- ◆ garantire che i temi di ricerca importanti e rilevanti per la comunità siano identificati e abbiano priorità
- ◆ garantire che la ricerca non si limiti a misurare i risultati che vengono identificati e considerati importanti per i professionisti o per il mercato
- ◆ garantire che i fondi pubblici non siano sprecati per la ricerca che ha poca o nessuna rilevanza, partecipando alle decisioni sul finanziamento
- ◆ migliorare progettazione e adesione, sostenere la diffusione dei risultati della ricerca, assicurare che i risultati siano trasferiti nella pratica
- ◆ discutere sull'etica della ricerca clinica, anche migliorando il processo di consenso

La ricerca clinica risponde ai bisogni dei pazienti?

Le ricerche cliniche degli ultimi 5 anni hanno risposto ai bisogni dei pazienti che rappresentate, in termini di rilevanza quesito clinico? (n=58)

No	44%
Non risponde	22%

Non abbiamo avuto ricerche cliniche, non possiamo rispondere (o non siamo a conoscenza) **Sindrome Ehlers Danlos**

Non siamo in grado di rispondere alle domande perché non siamo mai state coinvolte in ricerche cliniche né informate sugli esiti di eventuali ricerche effettuate nella nostra USL **Tumore del seno**

L'associazione non è in grado di rispondere perché non è a conoscenza delle ricerche cliniche in corso nell'area **Diabete**

Le ricerche cliniche necessitano ormai di studi multicentrici, di casistiche molto ampie e di fondi rilevanti. Tutto ciò esula dalle capacità di risposta della nostra associazione che inoltre essendo una onlus, è limitata ad attività che abbiano un'immediata utilità nei confronti dei pazienti **Urologia**

Mosconi, Ricerca & Pratica 2007

La ricerca clinica risponde ai bisogni dei pazienti?

Attualmente ritenete fattibile definire le priorità della ricerca clinica con clinici e ricercatori specialisti nel vostro settore di interesse?

No	13
Sì	41 71%
Non risponde	4

Portatori di quelli che sono i **reali bisogni dei pazienti** per stabilire un miglioramento della qualità della vita con ricadute anche a carico del care giver

I bisogni dei pazienti spesso **non coincidono** con gli interessi/necessità dei clinici

I bisogni dei pazienti **non sono solo farmacologici** ma riguardano anche gli ausili e andrebbero valutati anche gli aspetti della qualità della vita

Mosconi, Ricerca & Pratica 2007

Le esperienze

The James Lind Alliance: patients and clinicians should jointly identify their priorities for clinical trials

Dev 1 sees the launch of the James Lind Alliance at the Clinical Excellence conference in Birmingham, UK. Convened jointly by INVOLVE, the Royal Society of Medicine, and the James Lind Library, the James Lind Alliance aims to bring patients and practising clinicians together in a new way to identify and address the most important questions they face about the effects of care and treatments.¹⁴

In many areas over the past 10 years, involving patients, and to a lesser extent the public, in research has moved from a radical concept to an accepted and valued part of the research cycle. However, the past 10 years have also seen a decline in the number of non-commercial clinical trials,¹⁵ and the needs of patients and practising clinicians are still rarely discussed when deciding research priorities. Rather, the needs of industry and academia take precedence.

www.thelancet.com Vol 364 November 27, 2004

Clinicians might not always face important uncertainties about treatments and discuss them openly with patients, for understandable reasons.¹⁶ Yet discussion of well-informed uncertainty about treatments is essential to fully understand the real priorities of patients and to set the agenda for future trials of treatment.¹⁴

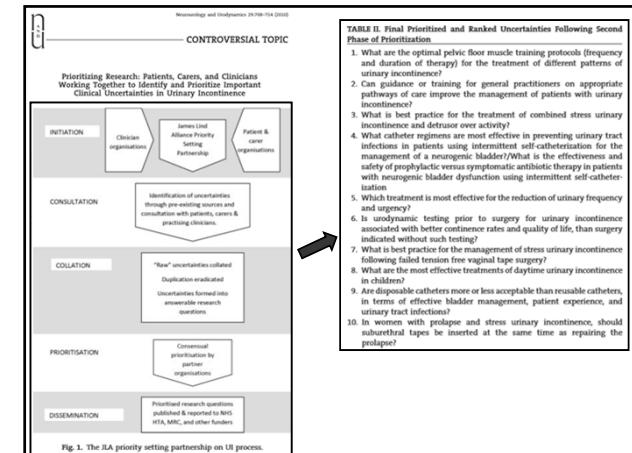

The James Lind Alliance is named after an 18th-century Scottish naval surgeon who, faced with uncertainty about how best to treat scurvy, did a controlled trial to find the

How do we do it?

The priority setting process:

- Set up steering group
- Invite partners
- Gather uncertainties
- Prioritize uncertainties
- Promote priorities to researchers and funders

 James Lind Alliance

INVOLVE

National Institute for Health and Research

Home > Research centre > Publications by INVOLVE > Publications > Exploring the impact of public involvement on the quality of research

Involve is a national advisory group which is funded by the National Institute for Health Research in the UK which was established to promote consumer involvement in all stages of the research process.

The rationale for the group is the belief that research which has consumer input is more likely to produce practical results that can be used to improve practice in health care.

They advocate for an active partnership between the public and researchers in the research process.

POPPY

Parents of Premature babies Project

The impact of public involvement on the research
Parents had a number of impacts on the study. The development of the research questions, the development of methods and the analysis of data were important areas where parents influenced the study. Parents tested the utility, relevance and applicability of the systematic review, and were involved in analysing and reviewing the qualitative data (Staniszewska, 2007;⁷ Brett, 2012).⁸ Perhaps their most significant impact was in the development of the model of care where the involvement of parents brought about a realignment in the philosophy of care, putting the family at the centre of care in neonatal units (Staniszewska 2012).⁹

With the power of experience behind them, the parents took part in presentations at conferences and in the National Institute for Health and Care Excellence (NICE)¹⁰ consultations. POPPY is referenced in a Department of Health neonatal toolkit and the United Nations Children's Fund (UNICEF) has included it in their quality standards for neonatal units.

Consumer Involvement in Dementia Research: Alzheimer's Australia's Consumer Dementia Research Network

Consumer Involvement in Dementia Research

Alzheimer's Australia 17

CONCLUSIONS

There is support for greater consumer involvement in research in Australia but there has been no objective evaluation of this involvement which is often considered too difficult or costly to support. The UK Alzheimer's Society's approach to consumer involvement has a model for actively engaging consumers in dementia research. The Alzheimer's Australia Consumer Dementia Research Network has been developed from this model, and aims to enable people with dementia and their carers to have a more active role in dementia research and knowledge translation. This network represents a sharp advance on the more traditional means of involving consumers through steering committees or simply as subjects of research.

The Patient-Centered Outcomes Research Institute (PCORI) National Priorities for Research and Initial Research Agenda

Joe V. Soltz, MD, MPH
Anne E. Bell, MD, MPH
Lisa Frank, PhD

© 2010 created the Patient-Centered Outcomes Research Institute (PCORI) to fund and promote comparative clinical effectiveness research (CER) that will "enable health care providers, patients, and makers in making informed health decisions by advancing the quality and relevance of evidence concerning the manner in which different medical interventions for a condition can effectively and appropriately be prevented, diagnosed, treated, monitored, and managed through research and evaluation." CER is a relatively new field that was then increased rapidly in recent years.

The research institute created by this legislation was

the research institute that the critical importance of a patient-centered perspective in conducting this research.¹ The PCORI board has decided to initially research the following seriously, placing patients at the center of CER and actively engaging clinicians and other stakeholders was an ideal strategy to ensure that the research agenda stays close to clinical realities, relevant outcomes, study populations, and the possibility that treatment effects may

be present in the merit reviews. A total of 60 individuals were subsequently recruited, trained by the NHI, and included as voting members of the 16 study sections (3 per section). Section members were also asked to include an additional criterion—extent of patient engagement.

The funding legislation required PCORI to develop na-

tional priorities for research and agendas for re-

search, and of other recent prioritization efforts.¹¹

The national priorities for research and agendas for re-

search were developed through a process of review and eval-

uation of the literature, and of input received through discussions with stake-

holder groups, professional organizations, and the medical sciences industry.

PCORI has also engaged in a process of stakeholder consulta-

tion to determine the critical importance of a patient-centered perspective in conducting this research.¹ The PCORI

Due sono i punti critici oggetto di discussione e attenzione all'interno del gruppo. Il primo la tendenza a modificare, abbassandone, le soglie per arrivare alla diagnosi di una malattia differente. In tal modo, si accetta la diagnosi di Alzheimer a fronte, come nel caso Alzheimer, di sintomi inadeguati ad avere piena efficacia a caratterizzare il quadro della malattia. Il secondo è la scelta di cosa misurare per valutare l'efficacia di una terapia con farmaci, cercando esiti che siano clinicamente significativi, e validi, per il paziente. Su questo ultimo punto si è concentrato il commento del gruppo di lavoro.

Purtroppo, per ragioni diverse, il tempo per l'organizzazione della risposta è stato molto compreso e così non è stato possibile un vero e proprio coinvolgimento del cittadino e dei rappresentanti delle associazioni di familiari e pazienti. Ora che il documento viene pubblicato, spiegherà che in diversi veglioni lasciare un messaggio attraverso il sito di Partecipasalute, vogliando così contribuire a contenuti del documento presenti nel documento di risposta è stato curato da Nicola Vassilacos e nello stesso è stato firmato. L'opinione di tutti i firmatari non necessariamente riflette la posizione ufficiale delle istituzioni cui i firmatari appartengono.

Bando 2012/2013/2012/2013 - Bando 100K

Fondazione Paracelso ha lanciato il secondo Bando 100K per la presentazione di progetti sul territorio italiano rivolti a persone con patologie croniche, cronopatiche e cronopatologiche, a loro familiari e alle persone che le curano.

L'obiettivo è promuovere e incrementare la qualità della vita dei soggetti portatori di patologie croniche, cronopatiche e cronopatologiche, e delle persone che vi sono legate, in collegamento con l'attività svolta dalla rete dei Centri emofilia. Fondazione Paracelso invita a proporsi chiunque, con un progetto che riguarda un campo di intervento diverso da quello già esistente, per dare vita ad un nuovo percorso di intervento.

Il progetto "100K" è progettato per il percorso di salute e la filosofia di intervento alla quale i progetti si dovranno riferire. I progetti devono essere proposti su orientamento culturale per la gestione della malattia che vada oltre la mera cura del sintomo.

Crediamo se necessario un impegno strutturato da parte di tutti in considerazione da che l'obiettivo assistenziale è a livello locale, che portano ancora troppi pazienti al cosiddetto "periferismo della salute", sia dalla situazione di crisi dei servizi sanitari regionali, forse a più bassa intuizione riferitasi a cure. L'obiettivo è migliorare l'assistenza clinica e sociale ai pazienti emofili e ai loro familiari offerta su territorio italiano dalle varie Componenti della rete (centri specializzati, medici del territorio ecc.).

Nel 2013 sono state presentate 9 proposte progettuali. Dopo i vagli del Comitato scientifico e sulla base delle valutazioni espresse da un comitato di referee indipendenti, il Consiglio d'Amministrazione ha determinato i progetti vincitori:

- **EMERGENZE NELLE I.M.C.: UN APPROCCIO WEB-BASED, UNITA Operativa Sempre D'partimento Centro Emofilia, Hattei Emorragie e Trasfusori Congeneiti - Presidio Ospedaliero di Perugia**
- **CELLULE RETTALI NEL CIRCOLO PATENIANO: STANDARIZZAZIONE DI UNA METODICA NON-INVASIVA PER LA VALUTAZIONE DELLA FUNZIONALITÀ DEL SISTEMA RETTALI** - Università di Perugia
- **ME PIACE SE TI MUOVI, PROMOVENTE L'ATTIVITÀ MOTORIA NEI BAMBINI AFFETTI DA ENOFILIA, ORINA PEDATICA E V. Vecchio - Università degli Studi di Ben "Alo" Moro**
- **LA PAZIENZA ENOFILICO: TRATTAMENTO IN EMERGENZA** Centro Emofilia Ospedale Santa Maria della Mennocorda, Perugia.

Cittadini e pazienti: alleati vulnerabili?

Patient Organizations' Funding from Pharmaceutical Companies: Is Disclosure Clear, Complete and Accessible to the Public? An Italian Survey

Abstract
Evaluation of transparency of pharmaceutical companies' funding of patient and consumer organizations in Italy.

Competing interests
The authors declare that they had no conflicts of interest with respect to their affiliation with any organization or entity.

Conclusion
Patient and consumer organizations accept drug industry fund companies and patient groups move closer, disclosure become essential for transparent communication. The survey shows that only 15% of the 157 associations of the Italian patient and consumer groups and a group of pharmaceutical companies have clear, complete and accessible information about the funding of patient groups of pharmaceutical companies on their websites. The websites were examined for the presence of a funding page, the amount of funds received, the names of the companies that are disclosed, update of sponsorship). Principal indicators were applied independently by two researchers. The survey was conducted in December 2013. A total of 157 associations of patient groups and 17 drug companies were considered. Thirteen drug companies (9%) can be considered transparent in their funding of patient groups. The survey shows that 157 patient and consumer groups (46.29%) named at least one pharmaceutical company as a funding source. The survey also shows that 157 patient groups (91.1%) do not disclose the source of funding. The survey shows that 157 patient groups (91.1%) do not disclose the source of funding.

FEATURE

COMPETING INTERESTS

Should patient groups be more transparent about their funding?

Patent groups often loudly shout for access to drugs but are quieter about their links to industry. Enrico Amati and Chiara Mabon ask whether this is acceptable given increasing demands for transparency.

I DATI DELLA RICERCA

17 aziende farmaceutiche sostengono 341 associazioni

157 associazioni incluse nell'indagine: 29% dichiara il sostegno nel proprio sito web. Di queste:

6% ne riporta l'entità
54% identifica l'attività sostenuta
0% riporta la proporzionalità dei fondi

The MDS Trust did not respond when asked whether greater transparency would be welcomed. It said: "Whether greater transparency is welcomed will depend on what the charity's independence and integrity is perceived by its policy on working with the drug industry, which is on its website".
Enrico Amati, a former director of the MDS Trust, said: "It is unacceptable that we do not share our money with the public. We have a duty to do so. We must do so to be seen as safe and effective and give a warning, because we do not know if we are giving money to companies that do not do what they say on the investment side".

Enrico Amati, the head of the MDS Society, Michelle Mitchell, wrote a letter in the *Daily Telegraph* to represent 45 MDS members, including the National Multiple Sclerosis Society (NMSS) (NCS), calling for blocking access to the "off-label" drug substances and families even though they "are licensed and paid off".
"We are not paid off. We are still in the process of being paid off".

The letter is addressed to the Secretary of State for Health, Jeremy Hunt, and to the Minister of State for Health, Matt Hancock.

Media funding for drugs is a new area of concern. In the UK, Chris Mahony, freelance journalist, London

- * **Il panorama dell'associazionismo** che rappresenta Citt e Paz è molto forte, radicato e frammentato, molto focalizzato sui bisogni
- * **Essere trasparenti** sulle modalità di coinvolgimento
- * **Contare** su finanziamenti della ricerca indipendente

Aree per implementare il coinvolgimento

Scopo e contesto

Identificare lo scopo di coinvolgere i consumatori
Individuare in quale fase si vuole coinvolgere i consumatori (es. definizione di domande di ricerca, la progettazione di strumenti di raccolta dati, raccolta di dati, risultati delle analisi, la diffusione dei risultati)
Identificare le caratteristiche dei consumatori di essere coinvolti
Identificare i problemi per ottenere contributi da parte dei consumatori

Preparare per coinvolgere i consumatori

Determinare come verranno reclutati e impegnati consumatori
Identificare le strategie per coinvolgere i consumatori (es. Membro del gruppo di ricerca, nel gruppo consultivo)
Identificare il supporto adatto per aiutare i consumatori a partecipare in modo efficace (es. supporto amministrativo, trasporti, parcheggi, persona da contattare)
Determinare i tipi di informazioni e di orientamento da fornire ai consumatori
Determinare strategie per chiarire e comunicare i ruoli dei consumatori
Identificare i requisiti di personale
Identificare i costi connessi col coinvolgimento dei consumatori

Monitorare e valutare i processi di coinvolgimento

Identificare i processi di monitoraggio e valutazione
