Gruppo Italiano per la Medicina Basata sulle Evidenze
Evidence-Based Medicine Italian Group

Decisioni Cliniche e Prove di Efficacia
La pratica clinica è dissociata dalle evidenze?
Rimini, 25-26 marzo 2006

Tavola Rotonda
Medicine alternative, complementari o non convenzionali?
Infinite speranze, tante credenze, poche evidenze
Conducono: Nino Cartabellotta, Alessandro Di Pasquale
Discussant: Felice Achilli, Geo Agostini, Giorgio Di Concelto, Fernando Gamberini, Saverio Lo Vecchio

- 1. Differenze tra CAM e MC
- 2. Efficacia delle CAM
- 3. Rischi delle CAM
- 4. CAM ed EBM

1. Differenze tra CAM e CM	
Conventional	Unconventional
Mainstream	Alternative
Orthodox	Unorthodox
Regular	Irregular
● Scientific	● Unscientific
Evidence based	Not evidence based
Allopathic	Naturopathic
Western	
Modern	

The most compelling (and most “inflammatory”) label is that conventional medicine is scientific and that unconventional is unscientific.

Dalen JE. Arch Intern Med. 1998

1. Differenze tra CAM e CM

1. CAM is predominantly **private medicine**, not reimbursed within the healthcare system.
2. Providers of CAM often **lack medical training**, and often are not physicians.
3. The **effectiveness and safety** of many forms of CAM is **not proven**, according to the EBM standards.

Ernst E, et al. J Med Ethics 2004

1. Differenze tra CAM e CM	
4. The research funds for CAM are currently scarce , much more so than in CM.	
5. CAM lacks a tradition or culture of modern, scientific research comparable to CM.	
6. CAM is claimed to be holistic and its benefits of CAM are thought to be mental, psychological, spiritual, and social; thus they can be less tangible or measurable than those of CM .	

Ernst E, et al. J Med Ethics 2004

Evaluating complementary medicine: methodological challenges of randomised controlled trials

BMJ 2002;325:832-4

Copyright © - GIMBE®

- CAM should be evaluated as rigorously as conventional medicine to protect the public from charlatans and unsafe practices, but many practitioners of CAM are reticent about evaluation of their practice.
- In defence, many CAM practitioners argue that research methods dissect their practice in a reductionist manner and fail to take into account complementary medicine's holistic nature leading to invalid evaluation.

Mason S, et al. BMJ, 2002

CAM: Where is the evidence?

- CAM cannot be evidence-based in the conventional sense of the word.
- Softer types of evidence need to be taken into consideration as well.
- Placebo effects must not be dismissed as nonbeneficial.
- The healing encounter includes significant factors that may never be quantifiable
- The scientific method cannot measure hope, divine intervention, or the power of belief.
- Research in CAM must consider social, cultural, political, and economic contexts.

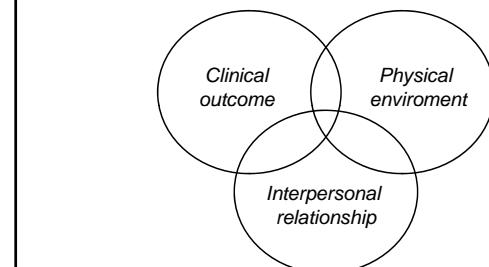

Ernst E. J Fam Pract, 2003

Quali fattori confondenti negli studi non controllati?

Soddisfazione dei pazienti

Copyright © - GIMBE®

Trials non controllati e studi osservazionali

Nella CM il loro ruolo è limitato a:

1. Malattie rare
2. Studi di fase II
3. Quando sussistono tutte le condizioni seguenti:
 - malattia ad esito sfavorevole/fatale
 - drammatica efficacia del trattamento
 - effetti sfavorevoli accettabili
 - assenza di trattamenti alternativi
 - presupposti fisiopatologici convincenti

Problems in testing CAM

- The average size of the overall therapeutic effect associated with CAM is usually modest and the NNT are often high (statistically significant but of debatable clinical relevance)
- Even minor adverse effects would therefore critically disturb the delicate balance of risk and benefit.

Ernst E. *J Fam Pract*, 2003

Table 1 Examples of techniques used in complementary and alternative medicine					
Technique	Method	Indication (examples)	Serious risks (examples)	Benefits*	Risk/benefit analysis
Acupuncture ¹⁷	Therapeutic	Chronic pain	Tissue trauma, infections (sepsis)	No convincing evidence	Uncertain
Acupuncture ¹⁸	Therapeutic	Nausea	Tissue trauma, infections (sepsis)	Convincing evidence	Positive
Aromatherapy ¹⁹	Therapeutic	Various	Allergic reaction, carcinogenic potential In some OTCs	Good evidence for relaxing effects	Uncertain
Chiropractic therapy ²⁰	Therapeutic	Intermittent classification	Kidney damage, electrolyte imbalance	No convincing evidence	Marginal
Chiropractic ²¹	Therapeutic	Back pain	Vertebral or carotid artery dissection	Promising but not convincing evidence	Uncertain
Herbalism ²²	Therapeutic (St. John's wort for depression) (Ginkgo biloba for treatment indications)	Increased risk of bleeding, interaction with numerous drugs Increased risk of bleeding, interaction with anticoagulants	Clear evidence that it is superior to placebo	Positive	
Hypnotherapy ²³	Therapeutic	Various	No serious direct risks of highly diluted remedies	No clear evidence for clinical effectiveness for any condition	Uncertain
Homeopathy ²⁴	Therapeutic	NA (diagnostic method)	Fake positive or false negative diagnosis	No convincing evidence	Negative
Massage ²⁵	Therapeutic	Back pain	No serious direct risks	No convincing evidence	Uncertain
Osteopathy ²⁶	Therapeutic	Various	No serious direct risks	No convincing evidence for clinical effectiveness for any condition	Uncertain
Spiritual healing ²⁷	Therapeutic	Various	No serious direct risks	No convincing evidence for clinical effectiveness for any condition	Uncertain

*Evidence based on recent systematic reviews or meta-analyses.

†Statistics have occurred.

‡45 examples of one specific herbal remedy.

Complementary and alternative medicine in the scientific literature

J Altern Complement Med 2005;11:209-12

Copyright © - GIMBE®

RESULTS

- During the period 1996-2002, a total of 20,209 articles about CAM were published
- Approximately 50% of CAM articles appeared on journals with no IF.
- The proportion of randomized clinical trials was 7.6% of total CAM articles.

Raschetti R, et al. *J Altern Complement Med* 2005

Copyright © - GIMBE®

CONCLUSIONS

- We believe there is an **urgent need to conduct rigorous research in the field of CAM** in order to support, for the need of the public, **an evidence-based approach** to these therapies.

Raschetti R, et al. *J Altern Complement Med* 2005

3. Rischi delle CAM

1. Direct harm

- Harm results from a side effect of a CAM
 - Herb-drug interaction
 - Toxicity of herbs
 - Vertebral artery dissection or nerve damage after chiropractic manipulation
 - Needle penetrating the lung during acupuncture

Kotsirilos V. Aust Fam Physician, 2005

Copyright © - GIMBE®

3. Rischi delle CAM

2. Indirect harm

- Results from the delay of appropriate treatment for a medical condition due to misinformation about unrealistic treatment of a condition.
- Indirect harm is often seen with cancer treatments.

Kotsirilos V. Aust Fam Physician, 2005

Copyright © - GIMBE®

3. Rischi delle CAM

3. Economic harm

- Many CAMs are marketed directly to the public through advertising and testimonials in the press, the internet, television, and through multi-level marketing.

Vickers AJ

Message to complementary and alternative medicine: evidence is a better friend than power

BMC Complementary and Alternative Medicine 2001;1:1

Copyright © - GIMBE®

- There are no good reasons to suggest that EBM is incompatible with CAM, or that it works to CAM's disadvantage.
- Were the CAM community to reject EBM, its future would be decided in the closed-off back rooms of power.
- By placing CAM on an equal footing with conventional medicine - what matters for both is evidence of effectiveness
- EBM provides an opportunity for CAM to find an appropriate and just place in health care.

Vickers AJ.
BMC Complementary and Alternative Medicine, 2001

Copyright © - GIMBE®

There is no alternative medicine.

There is only scientifically proven, evidence-based medicine supported by solid data or unproven medicine, for which scientific evidence is lacking.

Fontanarosa PB, et al. JAMA, 1998

5. La posizione del GIMBE®

SI'

- Favorire l'integrazione tra CM e CAM
- Identificare le problematiche metodologiche - diverse nelle varie tipologie di CAM - che esistono per la valutazione dell'efficacia delle CAM.
- Diffondere la metodologia della ricerca nelle CAM.
- Finanziare la ricerca per valutare l'efficacia e la sicurezza delle CAM.
- Rimborsare le CAM di documentata efficacia.

Copyright © - GIMBE®

5. La posizione del GIMBE®

NO

- Diffusione indiscriminata delle CAM
- Pratica delle CAM da parte di professionisti non medici
- Legittimazione delle CAM solo per il fatto che è praticata dai medici.
- Spingere i pazienti ad abbandonare CM di provata efficacia in favore di CAM dall'incerto profilo beneficio-rischio.
